

By: Jasmine Stanton, Cristina Olmedo-Bogicevicovca, Jaida hallowell & Sabreen Hamsa Ali

In this lesson Tyne class selected a range of materials, including construction materials to create a functional and aesthetic product - a castle for our fictional character, the Iron Man. Students were required to make 3D shapes using nets, stack recyclable materials (paper towel rolls), and decorate their castle with facades and other decorative features (turrets, windows).

Fungi spore dispersal

In 5/6 they performed an experiment on fungi spore dispersal. To perform this experiment, they placed a mushroom - without the stalks- on a piece of paper and observed how the spore release.

Crest club

In crest club (science) they finished their project: building a Lego set and finding out how to work well as a team.

Gardening plaque competition

The children are invited to get creative this holiday by designing your class plaque for the vegetable beds. On the plaque it must be bright colours and it must include elements of nature.
